Undergraduate Student

Herakleion, Greece
October 2018 - Present

General Lyceum of Kos "Odysseas Elytis"
High School Diploma

Kos, Greece
June 2018

WORK EXPERIENCE

Software Engineer Intern at TEI of Crete
Architected a mobile application project from start to finish.

Herakleion, Greece
May 2023 - Present

- The application (named *Healpen*) is a journal that allows users to express their feelings and thoughts. It also performs sentiment analysis on their entries, providing data for visualizing their mood.
- Designed the application in Figma, developed it using Flutter, implemented CI/CD using GitHub Actions and utilized Firebase for the backend and Google's Natural Language API for sentiment analysis.

Main and Pool Bar Waiter at "Ramira" Beach Hotel
Assisted in daily operations during high-traffic periods.

Kos, Greece
August 2022

- Supported team members during peak hours to maintain operations.
- Handled customer interactions in a busy setting.

Main Bar Waiter Assistant at "Ramira" Beach Hotel
Aided in ensuring a positive customer experience.

Kos, Greece
August 2019

- Assisted staff during busy hours to maintain a pleasant environment for guests.
- Supported team members in daily operations.

Frameworks:	Anaconda, Flutter, Nuxt3
Tools:	Git, GitHub, Figma, Tower, Visual Studio Code, JetBrains IDEs
Computer Proficiency:	Mobile app development, software architecture

PROJECTS

Healpen May 2023 - Present
Flutter, Full Stack, Firebase, Rive, CI/CD, UI Design

The "expressive writing" method has been clinically proven to enhance emotional well-being. Healpen is a journaling platform that allows users to freely express their thoughts and emotions. Through sentiment analysis, Healpen generates mood-based data visualizations from users' journal entries. The application is designed in Figma, built using Flutter and Firebase, with GitHub Actions handling the CI/CD pipeline.

mikezamayas.com

January 2023 - Present

Nuxt3, TailwindCSS, Cloudflare, Firebase, CI/CD

My personal website has been created and designed using Nuxt3 and TailwindCSS. It was successfully deployed through Firebase Hosting. A CI/CD pipeline has been established through GitHub Actions. Additionally, Cloudflare has been configured for domain name management.

flutter_ecommerce_website_demo

January 2022 - February 2022

Flutter, Firebase, CI/CD, Full Stack

A demo e-commerce website was implemented using Dart and Flutter. The frontend was developed using Flutter and the backend, including user authentication and database, was handled with Firebase. The website was deployed through a simple CI/CD pipeline utilizing GitHub Actions.

qrapp

September 2021 - June 2022

Flutter, QR Code

Designed and built an Android and iOS application for scanning and creating QR codes, complete with a history feature.

game_2048

June 2021 - June 2021

Flutter, Mobile Game

A Flutter implementation of the popular game 2048.

ehhealth_services_semester_project

January 2021 - January 2021

Flutter, Fitness Tracker, Health Data

An application was developed for visualizing data on sleep, heart rate, steps, and calories from a fitness tracker.

AWARDS
